Obsolete Vaccine Types

Vaccine types known to FLSHOTS that have either been retired, updated, or codes which we do not consider valid but will record if sent via automated means. If a code found in this list is also found in the active list, the below vaccine type was retired in favor of a new name, typically a result of related codes having been created or updated by official sources. Records which used a retired vaccine type will remain as they were unless/until modified.

FLSHOTS vaccine type availability dates:

Vaccination records sent which translate to these types will be rejected if indicated as administered before or after certain dates (see below) and if indicated that the vaccination was provided by the sending organization (code 00, in delimited field 34 or RXA-9 in an HL7 file/message). If not indicated as provided, the record will be considered historic.

Note: Some dates are approximations or placeholders where the vaccine is known to not have been available but the exact date is unknown and/or to prevent accidental invalid records. Dates noted as 'X' indicate never available. This list does not show availability dates for any obsolete vaccine types.
